- The following organisations have contributed to the cost of producing this Plan: Hampshire County Council, Environment Agency, Hampshire Wildlife Trust and English Nature.
- Individual action plans have been prepared by working groups involving many organisations and individuals - principal authors are acknowledged in each plan. The preparation of Habitat Action Plans has been co-ordinated by Hampshire County Council, and Species Action Plans by the Hampshire Wildlife Trust.
- Volume Two has been edited and compiled by Jacklyn Johnston, Consultant, on behalf of the Hampshire Biodiversity Partnership.

FOREWORD

**BIODIVERSITY
ACTION
PLAN FOR
HAMPSHIRE**

Commitment to biodiversity in Hampshire has grown remarkably since the publication of Volume One of the *Biodiversity Action Plan for Hampshire*. Specific projects for biodiversity have been initiated, district level biodiversity action plans are emerging, and topic groups are developing priority initiatives such as raising education, awareness and involvement and the development of biological recording.

Both the European Commission and the UK Biodiversity Secretariat have shown considerable enthusiasm for the approach taken to conserve biodiversity in Hampshire. For example, the Environment Directorate of the European Commission has co-funded a project investigating indicators for measuring the influence of European policies on biodiversity in Hampshire.

As local biodiversity action plans have evolved in recent years, so too has a greater realisation of their central role in delivering the UK Biodiversity Programme. The UK Biodiversity Secretariat is looking at ways of providing greater support for local biodiversity action plans and harnessing their capacity to help achieve the aims of the UK Programme.

The publication of Volume Two of the *Biodiversity Action Plan for Hampshire* marks an important stage in Hampshire's biodiversity programme. Volume Two contains detailed Habitat, Species and Topic Action Plans.

Each individual action plan has been prepared by a working group involving many organisations. The plans have been subject to extensive consultation to ensure that they are widely supported. Proposed actions set out in the plans are comprehensive, include specific targets, and present a considerable challenge.

In time, many more plans will be added to this volume. This is a working document that will help to direct conservation action and assist co-ordination of effort, so that we can all best achieve our aim of conserving biodiversity in Hampshire.

Lord Selborne

July 2000

INTRODUCTION

The *Biodiversity Action Plan for Hampshire: Volume One*, published in September 1998 by the Hampshire Biodiversity Partnership, sets out strategic action for biodiversity within the county.

This second volume includes detailed action plans for individual habitats and species of priority concern, and specific topics such as 'water management' and 'education and awareness' that have a considerable influence on biodiversity conservation.

**BIODIVERSITY
ACTION
PLAN FOR
HAMPSHIRE**

Biodiversity Action Plan for Hampshire – Volume One

- sets out the objectives of the Hampshire Biodiversity Partnership
- explains the Biodiversity Action Plan for Hampshire in the context of the UK Biodiversity Programme
- describes Hampshire's biodiversity
- identifies habitats and species of priority concern and explains how detailed action plans will be prepared and implemented
- reviews important issues that affect biodiversity in Hampshire and sets out the need for topic action plans
- promotes a strategy for managing information and data
- promotes a strategy for raising awareness of biodiversity and encouraging involvement in biodiversity conservation
- sets out specific action to be undertaken by the Hampshire Biodiversity Partnership

BIODIVERSITY ACTION PLAN FOR HAMPSHIRE VOLUME TWO

This volume contains action plans for:

- priority habitats
- priority species
- topics influencing biodiversity.

Each habitat, species or topic action plan will:

- identify broad objectives and targets
- identify specific actions to be undertaken
- identify lead agencies and other partners for delivery of each action
- set specific dates for delivery of action
- provide a reference point for monitoring progress
- be updated periodically
- be fully reviewed every five years together with the strategic action in Volume One.

HABITAT ACTION PLANS, SPECIES ACTION PLANS AND TOPIC ACTION PLANS

Purpose and Scope of the Action Plans

The overall aim of the habitat and species action plans and topic action plans is to achieve the successful conservation of biodiversity in the county. At the same time, the plans will effectively contribute to securing national objectives and targets in biodiversity.

The plans are a direct result of the strategy for biodiversity set out in Volume One of the *Biodiversity Action Plan for Hampshire*. They provide detailed plans of action and are the main working documents for those involved in conserving biodiversity.

The action plans set the conservation direction, outline priorities and present challenges to many organisations and sectors. They integrate previous and ongoing work, and amalgamate proposals and approaches adopted in other relevant plans and strategies. In turn, the action plans will help to refine, develop and implement these other initiatives. The plans set out action required at a variety of levels, from practical action at the local level to the influence of national policy and programmes.

Plan Preparation

Each action plan has been prepared by a working group or lead agency. Each has involved widespread consultation within and beyond the Hampshire Biodiversity Partnership, including all organisations that will be involved in carrying out actions identified in the plan.

The plans have been prepared by consensus to encourage each organisation to play a full part. This should help to achieve effective implementation. Each plan is comprehensive, forward thinking and has been widely supported during its preparation.

Implementation and Monitoring

The plans clearly identify the agencies for delivery of each action and the proposed timescale. Organisations can identify the actions relevant to them, and incorporate these into their own work programmes.

Some actions will be best undertaken by forums or groups rather than a single organisation. Several existing groups are well-placed to carry out particular actions and monitor progress. Implementation of other actions will require the establishment of new partnerships and projects. A high degree of collaborative effort will be needed.

The Hampshire Biodiversity Partnership will develop a strategy to promote the implementation of the plans, monitor progress and track their influence on the conservation of biodiversity in the county.

HABITAT AND SPECIES ACTION PLANS

Biodiversity Audit and Selection of Habitat and Species Action Plans

The Hampshire Biodiversity Partnership has undertaken an audit of habitats and species to determine their extent and distribution. This has enabled the identification of priority habitats and species. For a full description of the biodiversity of Hampshire and the criteria used for selecting key habitats and priority species, see Chapter 3 in Volume One of the *Biodiversity Action Plan for Hampshire*.

- **Habitat action plans** (HAPs) will be prepared for the 22 key habitats listed in Table 1.
- **Species action plans** (SAPs) will be prepared for the 43 priority species listed in Table 2a. There will also be 3 'grouped' SAPs prepared, and these will cover an additional 25 priority species (see Table 2b).

The criteria for selecting which priority species require an individual species action plan are explained in the section 'Strategy for Priority Species' below. A complete list of priority species in Hampshire is given in Tables 4 and 5.

Plan Format

Habitat and species action plans follow a standard format. Each plan:

- describes the importance, distribution, extent and status of the habitat/species
- audits current factors affecting the habitat/species
- identifies current action for the habitat/species
- sets **objectives** and targets to assist the conservation of the habitat/species
- sets out **proposed actions** to meet the objectives

Objectives of Habitat and Species Action Plans

Habitats

- Ensure no further loss or degradation of the habitat
- Increase the extent of the habitat
- Improve the quality of the habitat
- Ensure the requirements of all priority species associated with the habitat are met
- Improve knowledge of the habitat, through survey, research and monitoring
- Ensure appropriate provision of information and communication

Species

- Maintain existing populations of the species
- Enhance the status of the species in Hampshire
- Improve knowledge and understanding of the species through survey, research and monitoring
- Promote communication, education and awareness of the status and needs of the species

**BIODIVERSITY
ACTION
PLAN FOR
HAMPSHIRE**

Proposed Actions

The proposed actions in each **habitat action plan** are grouped under the following subjects:

- Habitat protection
- Habitat management, incentive schemes and other resources
- Species action
- Survey, research and monitoring
- Communication and publicity

The proposed actions in each **species action plan** are grouped under the following subjects:

- Site and species protection
- Site and species management
- Survey, research and monitoring
- Communication and publicity

For each proposed action in both habitat and species action plans the following are identified:

- Key partner responsible for implementation
- Other organisations to be involved in implementation
- Dates for delivery

The proposed actions in each plan are intended to be comprehensive, although further actions may be identified and implemented within the life of the plan. Proposed actions include existing action that should be continued or developed, and action that is new and requires initiation.

Strategy for Priority Species

The list of priority species in Hampshire currently stands at 493 species. Over 200 of these are also priority species in the UK biodiversity programme. The Hampshire priority list is presented in full in Table 4 (present species) and Table 5 (species considered extinct) and is summarised below.

	Hampshire Priority List	UK Priority List
Present/possibly present	424 (Table 4)	150
Extinct/probably extinct/vagrants	69 (Table 5)	51
Total	493	201

The priority list of species has been updated since the publication of Volume One of the Biodiversity Action Plan. A number of species have been added to the list, including additional species from the UK priority list with records in Hampshire.

Action for most of the priority species listed in Table 4 will be catered for by implementing the proposed actions in relevant habitat action plans, although some species have particular needs which cannot be catered for within HAPs. The following criteria have been used to identify those species that require an individual or grouped species action plan.

Species Action Plan Criteria	
A	Mosaic, landscape species, dependent on many habitats
B	High profile or indicator species
C	Very specialised species not sufficiently catered for in HAPs
D	Severely threatened species
E	Species where Hampshire has a very significant proportion of the national resource, or, species restricted to Hampshire

In addition, some species have been grouped together into a single 'grouped' SAP rather than dealing with each individually, due to their similar ecology, similar threats and/or similar actions required (Table 2b). In Tables 4 and 5, each species with a Hampshire SAP is shown with a 'yes' in the relevant column, and those with a grouped SAP are shown as 'yes (g)'.

National species action plans and other plans such as Butterfly Conservation Regional Action Plans also form part of the overall strategy for conserving priority species. The proposed action in these plans will also help guide action for species in Hampshire.

Action for Species in Habitat Action Plans

Most species are principally associated with a single habitat type and have secondary associations with perhaps one or two other habitat types. Tables 4 and 5 indicate the primary (1^o) habitat and secondary (2^o) habitat/s with which each species is associated. Most species will be mainly catered for by action in the habitat action plan listed as the primary habitat.

Each HAP contains three tables relevant to action for species:

- 1 **Priority species found primarily in the habitat.** This table also includes details of distribution in Hampshire, ecology of the species, specific management requirements, whether the species is the subject of an individual SAP, and an indication of other relevant plans such as a UK SAP.
- 2 **Priority species thought to be extinct in Hampshire but primarily associated with the habitat.** This table also includes information on the ecology of the species, distribution, specific management requirements and whether there are additional relevant plans.
- 3 **Priority species found primarily in other habitats but which also occur in the habitat.** This table indicates the primary HAP for each species and whether the species is the subject of an individual SAP.

Action specified in HAPs for the protection and management of the habitat will be generally supportive of the needs of most priority species associated with the habitat. Nevertheless, it will be important to ensure that particular requirements of priority species are catered for.

Tables 1 and 2 in Appendix 1 of each habitat action plan provides useful information to guide specific site management for individual species. Site managers should identify any priority species on their land to ensure that the habitat management undertaken also caters for the needs of these species. There is also an important role for conservation advisors working in

the wider countryside, to promote the needs of relevant species to landowners and secure favourable management for them.

Recognising the specific management requirements of different species will minimise conflict between general action for habitats and specific action for particular species. Where priority species are restricted to Hampshire or occur in very few sites, detailed site management plans for the species will be needed to ensure their successful conservation.

TOPIC ACTION PLANS

Volume One of the *Biodiversity Action Plan for Hampshire* set out the need for strategies or plans to deal with wider issues influencing biodiversity such as water management, agriculture and development. A definitive list of issues that require individual action plans has not been produced: the need for topic plans will be reviewed on an ongoing basis, taking account of the extent to which the issues are addressed in plans prepared by relevant organisations or forums. In some cases it will be better to influence other strategies and plans, rather than prepare an independent plan.

Volume One also set out the need for programmes to develop awareness and involvement in conserving biodiversity, and for ensuring adequate data and data management to support the biodiversity programme. Topic Plans aimed at raising awareness, involvement and education, and for developing biological recording, will be added to Volume Two.

CONTACTS

Habitat, Species and Topic Action Plans

- For general information on Habitat Action Plans contact:
David Pape, Environment Group, Planning Department, Hampshire County Council, The Castle, Winchester SO23 8QE, Tel: 01962 846739.
- For general information on Species Action Plans contact:
Debbie Wicks, Hampshire Wildlife Trust, 8 Romsey Road, Eastleigh, Hampshire SO50 9AL, Tel: 023 8061 3636.
- Contacts for individual action plans are provided in each plan.

Biodiversity Action Plan for Hampshire

- For further information on the Hampshire Biodiversity Partnership and the Biodiversity Action Plan programme, contact:
David Pape, Environment Group, Planning Department, Hampshire County Council, The Castle, Winchester SO23 8QE, Tel: 01962 846739.

**BIODIVERSITY
ACTION
PLAN FOR
HAMPSHIRE**

KEY TO TABLES 4 & 5: PRIORITY SPECIES IN HAMPSHIRE

County Occurrence

- 1 Present
- 1? Possibly present
- x? Probably extinct
- x Extinct

Following categories for birds only - codes preceded by 1 if present, or x if extinct

- b Breeding species
- w Wintering species
- p Passage migrant
- o Other

Significance of Hampshire population

- RH Restricted to Hampshire; found nowhere else.
- NS National stronghold; Hampshire holds at least 10% of the national population.
- RI Regionally important; SE England a stronghold for the species; Hampshire holds a significant proportion of this.
- Wi Widespread in the UK and in Hampshire.
- Is Isolated.

1° HAP – Primary habitat associated with the species

The codes relate to the habitats listed below. Each species is allocated primary habitat that it best fits into

2° HAP – Secondary habitat(s) associated with the species

The codes relate to the habitats listed below. Each additional habitat in which the species occurs is included here.

Habitat Action Plan (HAP) Codes

- 1 Ancient semi-natural woodland
- 2 Pasture woodland, parkland
- 3 Hedgerows
- 4 Arable land
- 5 Unimproved neutral dry grassland, hay meadows
- 6 Lowland calcareous grassland
- 7 Lowland wet grassland
- 8 Heathland, acid grassland, bog
- 9 Fen, carr, marsh, swamp, reedbed
- 10 Open standing water
- 10a Ephemeral ponds
- 11 Chalk streams
- 11a Rivers and streams
- 12 Canals
- 13 Maritime cliffs
- 14 Shingle
- 15 Saltmarsh
- 16 Coastal grazing marsh
- 17 Sand dunes
- 18 Mudflats, eelgrass beds
- 19 Saline lagoons

20	Road verges
21	Urban
22	Marine
m	Dependent on many habitats, mosaic/landscape species
No	No habitat defined, peculiar requirements, does not fit into habitats above
Nf	New Forest only (followed by habitat number or code as above)

Notes:

All species with 'm' habitat will need a SAP under criterion A
 All species with 'no' habitat will need a SAP under criterion C
 All other species should have a primary habitat but may still qualify for a SAP under criteria B C D or E
 All species restricted to the New Forest ('nf' habitats) will be included in the New Forest Topic Action Plan

Hampshire SAP?

Yes SAP to be prepared
 Yes(g) SAP covering a group of species to be prepared

SAP Criteria

A Mosaic, landscape species, dependent on many habitats
 B High profile or indicator species
 C Very specialised species not sufficiently catered for in HAPs
 D Severely threatened species
 E Species where Hampshire has a very significant proportion of the national resource, or, species restricted to Hampshire

Priority (UK/Local)

P UK BAP priority species
 C UK BAP other species of national conservation concern
 L Locally important species
 BC Listed in Biodiversity Challenge

TABLE 4: PRIORITY SPECIES IN HAMPSHIRE – PRESENT

Scientific name	Common name	Group	County occurrence	Significance of Hants population	Decline	Local Rarity	Threat	1° HAP	2° HAPs	Hants SAP?	SAP Criteria	Priority (UK/Local)
<i>Lamprothamnium papulosum</i>	foxtail stonewort	Algae	1	NS	Stable	Rare	High	19	-	no	-	P
